**Spartek Systems** specializes in providing the oil and gas industry with high quality data to monitor well performance and diagnose potential problems. Founded in 1994, Spartek Systems leads the industry in providing cost effective solutions for acquiring reliable well information.

**Product Overview**

Spartek Systems provides a wide range of gauge carriers for deploying one to four electronic memory recorders in line or beneath the tubing string or drill pipe. The carriers are designed to minimize fluid flow restriction while maintaining high burst and collapse pressures. These carriers can be configured for measuring both internal (tubing) and external (annulus) pressures.

Data from these recorders provides invaluable information. Pressure profiles obtained during well stimulation provide a record of the efficiency of the operation. Changes in bottom hole pressure immediately following casing perforation can be used to determine the potential effects of near wellbore damage. ‘Spartek Systems’ gauge bundle carrier is a cost effective solution for conveying multiple electronic memory recorders in a tubing string or drill pipe.

**Primary Features**

- High Tensile Strength
- Capability to Measure Internal or External Pressures
- Metal to Metal Seals with Double O-Ring Backup
- High External/Internal Burst/Collapse Strength
- 2 - 4 Gauge Carrying Capacity*  
- Thread Connections to Fit Your String

* Depending on Carrier Model

**Applications**

- Drill Stem Testing
- Hydraulic Fracturing
- Chemical Treatments
- Gravel Packing
- Well Stimulation
